Deepak Warude | Computer Engineering

+91 9970103732 | deepakwarude009@gmail.com | LinkedIn | GitHub

SUMMARY

Computer Engineering student with hands-on experience building and deploying ML-powered applications in healthcare and software development. Proficient in Python and JavaScript, with practical expertise in TensorFlow, Scikit-Learn, and NumPy across NLP, classification, and regression tasks. Experienced in integrating ML solutions into scalable web and mobile applications using React Native, Firebase, and Node.js, with a solid foundation in system design and Agile practices.

EDUCATION

- **B. Tech – Computer Engineering** | K. K. Wagh Institute of Engineering Education & Research | CGPA: 8.00 | Nashik *Jun 2027*
- **B.S Foundation – Data Science & Applications** | IIT Madras | Chennai *Jun 2025*
- **HSC – Science** | Kendriya Vidyalaya No. 1 Devlali | Percentage: 83.4 | Nashik *Jul 2023*
- **SSC** | Kendriya Vidyalaya No. 1 Devlali | Percentage: 90 | Nashik *May 2021*

TECHNICAL SKILLS

Machine Learning & AI: Supervised & Unsupervised Learning, Regression & Classification, XGBoost, CNN

Programming Languages: Python, C++, C, Java

Libraries & Modules: NumPy, Pandas, Scikit-learn, TensorFlow, Matplotlib

Development: HTML, CSS, JavaScript, React Native, Angular, Express.js, Node.js, NestJS

Databases: MySQL, MongoDB, PostgreSQL, Firebase Firestore, SQL (relational & query optimization)

Platform: Git, GitHub, CI/CD (GitHub Actions), Docker, Jupyter Notebook, Google Colab, Postman

Course Work: Data Structure & Algorithm (DSA), Object Oriented Programming (OOP), Database Management System (DBMS), Operating Systems (OS)

EXPERIENCE

App Developer | Runverve | Remote Jun 2025 - Dec 2025

- Developed SmartHeal app using React Native and Firebase, built a health analytics system with real-time monitoring and accurate behavioral data analysis.
- Improved backend performance through optimized database queries, significantly reducing API latency across the platform.
- Led 5-member Agile team delivering production-ready AI/ML features on schedule for an AI-driven IoT healthcare solution.

Social Media Manager | Runverve | Remote Dec 2024 - May 2025

- Executed data-driven campaigns that increased engagement, reach, and follower growth using audience analytics tools.

PROJECTS

Swasthyam — AI-Powered IoT Integrated Oil Tracker | React Native, Node.js, MongoDB Sep 2025 - Dec 2025

- Built an AI-powered IoT platform achieving 85% prediction accuracy. Won Smart India Hackathon 2025 (Software) among 1000+ competing teams.
- Deployed ESP32-Pico sensors with cloud integration, designed scalable microservices backend achieving 97.5% uptime, filed patent for AI formula logic and predictive analytics module.

SmartHeal — AI-Powered Therapeutic Platform | React Native, NestJS, Firebase, Docker Mar 2025 - Dec 2025

- Developed real-time AI health monitoring system supporting 500+ users with Firebase and NestJS APIs, reduced code redundancy by 35% via modular architecture and reusable components.
- Designed dual-mode architecture (Pro & Guided) with multi-profile personalization, voice control, and automated ITT electrode placement and personalized therapy recommendations using React Native Expo and Firebase.

Client Management Dashboard | React, TypeScript, Tailwind CSS Jan 2026 - Apr 2026

- Built responsive analytics dashboard using React and TypeScript with real-time communication, data visualization features, and type-safe scalable architecture for wellness applications.
- Built responsive therapy monitoring SaaS using Firebase and Tailwind CSS with real-time data synchronization.

Rakshak HRMS Battalion Strength Management System | Electron, React, TypeScript, Tailwind CSS Mar 2026 - Present

- Built an offline desktop HRMS for Indian Army battalion-level personnel management with role-based access, soldier profile management, and real-time unit strength tracking dashboard.
- Implemented Parade State and Leave Balance exports to Excel and PDF with secure local authentication, actively deployed with 14 Jat Regiment of Indian Army.

ACHIEVEMENTS

Winner - Smart India Hackathon (SIH 2025) Sep 2025 - Dec 2025

- Built “Swasthyam,” a full-stack AI-driven IoT application using React Native with 85% prediction accuracy.

Finalist - Smart India Hackathon (SIH 2024) Sep 2024 - Dec 2024

- Built a cryogenic storage system enhancing efficiency and reliability of medical tube preservation.

Filed Copyright Jan 2026 - Apr 2026

- Developed a generalized oil formulation model using research papers and mathematics.
